

Scatterplot of Heights vs. Weights for a Sample of Teens Ages 13–18

Individually answer the following questions about the plot in your DS journals:

1. What kind of plot is this and how will you remember its features?

2. How many variables are displayed in this plot? Name the variable(s) and identify the type of variable(s).

3. What do the axes show?

4. What relationship exists between the two variables? What information can you tell about this data set?
